STAGE 07

Documentation and Demo

Setup runbook, demo storyline, troubleshooting, and submission checklist.

PROJECT	STACK	DOCUMENT
HotelPro	React • Vite • Express • MongoDB	Stage 7 of 7

Documentation note

Prepared from HotelPro project context shared earlier. Verify implementation details against the current repository. Historical test/build figures are marked as reported, not freshly verified.

System overview

HotelPro is a local hotel management web application using React/Vite, Node.js/Express, and MongoDB. Confirm current branch and features before recording the final demo.

Runbook

Step	Action	Expected check
1	Open repo and inspect scripts	Correct branch/commands
2	Start MongoDB	Configured DB reachable
3	Create Server/.env from example	No secrets committed
4	Start backend	API listening; reported port 8001
5	Start frontend	Vite running; reported port 5173
6	Login with valid seeded account	Dashboard loads
7	Test room/booking flow	Data persists and validation works

Demo flow

Suggested timing

Segment	Time	Show
Problem/architecture	45 sec	Need and architecture
Authentication	60 sec	Login/dashboard
Rooms	60–90 sec	List, create/update
Bookings	90 sec	Valid booking and negative case
Quality	45 sec	Fresh test/build evidence
Wrap-up	30 sec	Limits and future work

Troubleshooting

Symptom	Check
DB connection fails	MongoDB service, URI, database name
Port occupied	Identify process or change port consistently
Login fails	Check normalization and seed data; never log passwords
API fails	Base URL, port, CORS, browser console
Admin denied	Seed role, session/token, role middleware
Changes not visible	Working directory, process, branch

Submission checklist

Item	Status
Diagrams match current source	[ ] Verify
Endpoints/roles accurate	[ ] Verify
Fresh tests/build recorded	[ ] Verify
Screenshots current and secret-free	[ ] Verify
README has setup/seed/run steps	[ ] Verify
Secrets excluded from Git history	[ ] Verify
Limits separated from future work	[ ] Verify

Future work

Possible enhancements include notifications, payment gateway integration, occupancy analytics, audit logs, backups, accessibility review, deployment hardening, and load testing. Treat as planned unless verified in code.
