STAGE 02

Requirement Analysis

Functional/non-functional requirements, roles, and traceability.

PROJECT	STACK	DOCUMENT
HotelPro	React • Vite • Express • MongoDB	Stage 2 of 7

Documentation note

Prepared from HotelPro project context shared earlier. Verify implementation details against the current repository. Historical test/build figures are marked as reported, not freshly verified.

Functional requirements

ID	Requirement	Acceptance evidence
FR-01	Authenticate users	Valid login succeeds; invalid rejected
FR-02	Manage rooms	CRUD validated and role-protected
FR-03	Create bookings	Dates and availability checked
FR-04	Payment-related records, if implemented	Correct booking association and error handling
FR-05	Admin/staff access	Forbidden actions blocked server-side
FR-06	API feedback	Loading, success, empty and error states

Non-functional requirements

Area	Requirement	Verification
Security	No secrets in source/logs	Review env and logs
Reliability	Consistent API errors	Negative-path tests
Usability	Clear form feedback	UI walkthrough
Performance	Responsive common operations	Measure latency
Maintainability	Organized layers	Code review/build

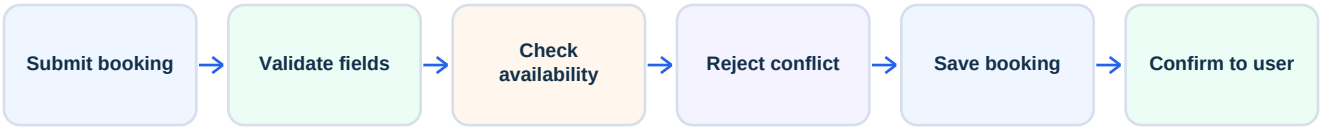
Role matrix

Action	Guest	Staff	Admin
Browse rooms	Allowed	Allowed	Allowed
Manage rooms	No	If authorized	Allowed
Manage users/roles	No	No by default	Allowed

Traceability

Requirement	API/data	UI	Test
FR-01	Auth routes/user model	Login	AUTH-01
FR-02	Room routes/model	Room management	ROOM-01
FR-03	Booking routes/model	Booking form	BOOK-01
FR-05	Auth middleware	Admin/staff views	ROLE-01

Booking decision flow



Open decisions

Payment provider, cancellation/refund policy, notifications, deployment target, and production requirements must be verified from the current project brief/code; do not present unconfirmed items as completed.
